Clinical Advantage
Fast, accurate results from Spacelabs’ ABP system enable you to fine-tune your patients’ treatment and better assess their cardiovascular risks. Its reliability has made it the #1 ABP monitor in the world, preferred by physicians and patients alike. Its latest software supports compliance with government requirements for integrity, availability, security and confidentiality of patient health information.

Innovation
Our proprietary oscillometric algorithm has been proven in over 20 years’ use in pediatric, adolescent, adult and elderly patients with a variety of disorders. Its accuracy has been validated by official organizations* in the US, UK, France and Germany.5,6 Researchers have selected Spacelabs Healthcare’s ABP monitors for more than 500 clinical studies, including the landmark DASH, SYST-Eur and AASK** analyses.

Value
The cost to treat hypertensive disease in the US is estimated to be $37.2 billion per year in direct costs, with a total cost of $50.3 billion.7 As many as 35% of patients identified as hypertensive by office measurements may actually be normotensive.2,3 When ABP monitoring identifies those patients with white-coat hypertension, you may be able to spare them the cost and side effects of antihypertensive drugs that may not be needed.2 Thus, improved diagnostic accuracy could save millions of dollars.

Simplicity
Patients especially like the monitor’s compact design, light weight and quiet operation, so they’re more likely to follow your instructions, and you’re more likely to get the results you need. The Ultralite™ 90217 is small enough to fit in a shirt pocket. Choose from 5 cuff sizes ranging from child (12-20 cm) to extra-large adult (38-50 cm) for maximum accuracy and comfort.

Which of your patients could benefit from ambulatory BP

According to the new JNC VII Guidelines1, ambulatory BP monitoring (ABPM) is “warranted” for patients with “white-coat” hypertension – 20 to 35% of patients who are hypertensive in your office may be normotensive at home2,3

JNC VII also suggests that ABPM aids in assessing patients who:
• are not responding to antihypertensive therapy
• are taking antihypertensive medication and are experiencing symptoms of hypotension
• have episodic hypertension
• have autonomic dysfunction

ABPM is a proven, reliable tool:
• ABPM data correlates better than office measurements with target organ injury1
• ABPM illustrates the extent of BP reduction during sleep; those whose BP doesn’t drop at night are at increased risk for cardiovascular events1
• Recent studies suggest that ABPM data more accurately reflects a patient’s actual BP than casual or in-office BP measurements2,3
• Availability of ABPM data improves the physician’s ability to predict CV risk3.

* US - Association for the Advancement of Medical Instrumentation (AAMI)
UK - British Hypertension Society, France - Homologation standards, Germany - PTB, GDT
**DASH - Dietary Approaches to Stop Hypertension
SYST-Eur - Systolic Hypertension in Europe
AASK - African American Study of Kidney Disease and Hypertension
92506 ABP Report Management System

- Interfaces with 90207 and 90217 ABP monitors
- Software offers quick and simple method of retrieving, displaying, editing and printing ABP data
- Configurable report format
- Enhanced graphics
- Advanced search capability
- Remote communications feature for programming and data retrieval via modem
- Supports e-mail transfer of reports as PDF files
- Supports compliance with FDA electronic records requirements and HIPAA

Patient Report and Demographic information may be easily customized for the individual hospital, office, or other clinical setting. Pull down menu facilitates the insertion of indications and medications. Report provides unlimited space for interpretation commentary.

Provides a day, night and 24-hour summary for systole, diastole, mean arterial pressure, pulse, heart rate, and nocturnal dipping status. Statistical boundaries for systole and diastole may be easily revised to accommodate the standard desired for the individual patient.

ABP Monitors and Accessories

2 models assure patient comfort and compliance

**Ultralite™ 90217 monitor**
- Small – approximately 1” x 4” x 2.3/4” (2.5 x 10 x 7 cm)
- Weighs just 9 oz (255 g) including 3 AA batteries

**90207 monitor**
- Compact – approximately 1.1” x 4.5” x 3.4” (2.8 cm x 11.4 cm x 8.6 cm)
- Weighs 12.2 oz (347 g) including 4 AA batteries

Variety of cuffs assures accuracy
- 1 child size, 4 sizes for adults - small, standard, large, extra-large
- Cuff may be worn over a light shirt or blouse
- Can be easily removed and replaced for dressing and bathing

**ABP Report Management System**
(Workstation or Networked Solution)
Program, retrieve, display, edit and print ABP data from any networked PC across your site using Spacelabs ABP recorders.

90239A ABP Report Generator/Printer
- Simple, cost-effective way to analyze data from Spacelabs’ ABP monitors
- Programs the monitor, analyzes the raw data, assembles data into a report
- Reports include 24-hour day and night summaries of systolic, diastolic, mean arterial pressure, and heart rate
